Into The Cloud: The Future of Computing

### **REFLECTION PAPER**

What I expect in the seminar is just like in the seminars that have happened over the past few seminars that the speaker will explain to us how the topic of seminar itself then go to the workshop but then it turns out that it is more complex and actually it is fun learning how cloud computing works, this topic is so broad and it seems to me that cloud computing such as machine learning is still being discovered like it is not yet fully discovered and with every innovative ideas on how cloud computing can be done. It is also impressive that the speakers engaged with us in fun websites such as partyrock and the aws simulator that looks like meta simulator, big plus since you get to know how the real world works, especially in computer-related programs.
